Information Update – 28 September 2026

**Swell Surge (Kallakadal) Warning to Kerala, South Tamil Nadu and
Lakshadweep Islands for 26–28 September 2026**

INCOIS issued Swell Surge (Kallakkadal) Warning for Kerala, South Tamil Nadu and Lakshadweep for 26–28 September 2026, following the arrival of high-energy, long-period (20–25 seconds) swell waves from the southern Indian Ocean. The predicted swells were confirmed through INCOIS real time observations, including drifting, moored and wave-rider buoys. Feedback from KSDMA and news agencies confirmed rough seas and seawater inundation at several coastal locations across Kerala and South Tamil Nadu.

As per multi model guidance and real time observations, the high-energy sea conditions associated with the swell surge event have subsided. The warnings associated with this event are no longer in effect.

However, as local conditions may cause significant variations in wave action, the determination of “ALL CLEAR” should be made by the State/District authorities based on local sea and beach conditions.

Updates and information on future events will be published on the INCOIS website. The public is advised to regularly check the official INCOIS website <https://incois.gov.in/site/news.jsp> for the latest updates.
