### 3. Scope of Work:

The existing version of Siemens IBMS software at INCOIS main building is obsolete since June 2021 and there are no updates / patches put-on since installation, which is making it impossible to add / modify the critical functionalities. The existing Honeywell software available at ITCOO building is also not under support or being updated with patches. As per volume, more nodes at INCOIS main building are linked to Siemens IBMS in comparison to lesser nodes associated with Honeywell IBMS at ITCOO building. For ease of operations, it is proposed to integrate / control both the buildings from a common GUI and considering the economics, it is proposed to augment the existing Siemens IBMS software to accommodate the functional requirements as explained.

With regards to Fire suppression system, it was briefed that the HFC-227ea gas based system was rarely used and had not undergone any kind of tests to ensure the operational usability of the system. The next generation replacement for the existing system is the Siemens FK-5-1-12, a clean agent fire suppression solution.

For the purpose of central monitoring, one number of repeater fire alarm panel for the amenities building is to be put up near security desk located in INCOIS main building, which is not available as on date. In certain areas, do not have any response indicators at the above ceiling detectors. Based on the brief mentioned above, the detailed scope of work is as follows.
